

IN THE SPECIFICATION

Please amend the specification as follows:

[0041] The mounting bracket 154 is also attached to a bullet containment frame, generally indicated at 160, via one or more arms 154' which extend away from the facing strip 112 and plates 104 and 108. The bullet containment frame 160 typically includes a wood post, such as a two-by-four 164 which is attached to the mounting bracket 154. When the mounting bracket 154 is made from tin or some other relatively pliable material, the two-by-four 164 can be attached by simply driving a fastener 168, such as screws or nails, etc., through the mounting bracket 154 and into the two-by-four. If desired, the mounting bracket 154 can have preformed holes through which the fasteners may be driven. In the alternative, the fasteners can simply be driven through the tin, etc., of the mounting bracket.
